SUMMARY

Bioprocess Engineering graduate specializing in process optimization and production systems design. His previous experiences equipped him with strong analytical and quantitative thinking, engineering problem solving, and ability to communicate complex concepts to multiple layers of stakeholder. Firm foundation in biomass processing sciences and process design, control, and engineering, Stanley is aspiring to have an early career within industrial settings, especially production, quality, and research.

RELEVANT EXPERIENCE

Research Assistant

February 2026–March 2026

Confidential

- Determine molecular docking result of various protein marker for dentine regeneration towards Bioglass S55P4 + DPSC-CM.
- Executed docking simulations, analyzed binding affinities, interaction residues, and structural conformations to assess the regenerative potential and molecular compatibility of the treatment.

Dynamic Modelling in Bioengineering Teaching Assistant

February 2025–May 2025

School of Life Sciences and Technology Institut Teknologi Bandung (SITH ITB)

- Designed case studies in dynamic modeling and process control, covering key topics such as linearization, numerical ODE solutions, Laplace transforms, transfer functions, and dynamic system behavior and interdisciplinary
- Tutored and evaluated assignments for 50+ students in modelling bioindustrial processes using MATLAB, Simulink, and SuperPro Designer, ensured accurate application of theoretical knowledge.

Health, Security, and Environmental Intern

June 2024–September 2024

Reckitt Benckiser

- Assessed the condition and performance of a 150 m³ activated sludge wastewater treatment plant (WTP) system for soap production through daily testing of temperature, total organic content (TOC), mixed liquor suspended solid (MLSS), and sludge volume.
- Calculated mass balance and conducted literature-based investigation of WTP system performance decline root cause as well as determined possible mitigation plan.

General Physics Tutor

August 2022–December 2022

Gajah Akademi Private Tutoring

- Provided weekly intensive one-on-one private tutoring for 5 students in General Physics I, covering mechanics, kinematics, dynamics, energy, momentum, and basic thermodynamics.
- Designed individualized problem sets and study guides to reinforce theoretical understanding and strengthen problem-solving skills.
- Guided students through exam preparation, clarifying misconceptions and providing step-by-step approaches to complex physics problems.

General Chemistry Laboratory Assistant

August 2022–December 2024

General Chemistry Lab Institut Teknologi Bandung (LKD ITB)

- Delivered six experimental modules on fundamental chemical reactions, stoichiometry, and the proper use of chemical laboratory instruments and equipment to first-year ITB students.
- Supervised and evaluated the performance of 30 chemistry lab students divided into five groups based on laboratory techniques, report, and self-devised written quizzes.

EDUCATION & ACADEMIC PROJECTS

Institut Teknologi Bandung

Bachelor of Engineering–S.T., Bioprocess Engineering

August 2021–August 2025

GPA: 3,87/4,00

Extracurricular Activities: Solve It ITB, Bioengineering Student Association (HMRH ITB)

- **Final Thesis Preliminary Design:** Production System for Crude Mutant PETase Enzyme from *Escherichia coli* BL21 (DE3) in a Defined Medium with Glycerol as Carbon Source
- **Final Thesis Research:** Optimization of Mutant PETase Enzyme Production in a Defined Medium Using High-Fructose Corn Syrup as Carbon Source and IPTG as Inducer
- **Fermentation Technique Capstone Project:** Kinetic Analysis of Growth and Fermentation Product Formation by *Aspergillus niger* in Liquid Broth Suspension
- **Bioengineering Laboratory Capstone Project:** Activated Carbon Production from Candlenut (Kemiri) Seed Shells with Varying Concentrations of ZnCl₂ Activator

PROJECTS & ORGANIZATIONS

Research and Development Staff

January 2024–July 2024

Asa Cerra

- Devised a scaled-up production plan of Nata de Whey from laboratory scale (150 g/batch) to household scale (500 g/batch) for the student-led seed funded start-up “Asa Cerra”
- Conducted basic research trials on optimizing the production process and quality of Nata de Whey derived from fermented cheese by-products.
- Coordinated with investors, stakeholders, and the overall management team throughout the program.

Welfare & Logistics Division

August 2022–May 2025

Himpunan Mahasiswa Rekayasa Hayati (Bioengineering Student Association)

- Provided on-demand tutor classes, for 3 cohorts of bioengineering students (150+ members) to prepare for mid-semester exam and final semester exam. Teaching courses such as Thermodynamics in Biosystem, Dynamic Modeling in Bioengineering, Transport Phenomena in Biosystem and Principles of Bioproduct Separation.
- Led organization logistics and procurement for events, including personage allocation and resource management.

Academic Division & Peer Tutor

August 2021–July 2022

Badan Pengurus Angkatan SITH-R ITB Cohort 2021

- Provided public tutoring classes open to all first-year students to prepare for faculty quizzes, mid-semester exam, and final semester exams. Teaching courses such as Basic Chemistry, Basic Physics, Basic Mathematics, and Introduction to Computing.
- Managed tutoring schedule and assignment tutoring shifts among division members.

SCHOLARSHIP & ACHIEVEMENTS

Kartu Indonesia Pintar–Kuliah (KIP-K) Scholarship

September 2022

- Full ride scholarship worth Rp108,000,000 (+\$7500) including tuition waiver, allowance money, and personal development trainings by the Indonesian Ministry of Education and Culture for students from disadvantaged economic background.

Top 10 Finalist Circular Innovation Challenge 2023

October 2023

- Top 10 finalist in the Circular Innovation Challenge (CIC) organized by Thammasat University of Global Studies; proposed the product idea “Preservateaves”, a desiccant made from tea industry waste designed to extend the shelf life of fruits.

Top 10 Finalist I-CAST PGD UI 2024

April 2024

- Top 10 finalist in the 2024 Process and Green Engineering Days (PGD) competition at Universitas Indonesia, with a proposed solution to improve the effectiveness and quality of black soldier fly (BSF) frass organic fertilizer through bokashi fermentation and rotary drum bioreactor system.

PMW X TOP ITB 2024 Grantee

April 2024

- Part of research team behind “Asa Cerra” student start-up granted Rp12,500,000 (+\$700) of seed funding from the campus incubation Program Mahasiswa Wirausaha/Student Entrepreneurship Program x Technopreneurship Orientation Program (PMW X TOP ITB 2024)

SKILLS & CERTIFICATION

Process Modelling: Simulink, AutoCAD, SuperPro, Aspen HYSIS (FTUI Software Training 2023)

Data Analysis: Minitab (ICE ITB), MATLAB, SPSS, Ms. Excel (PivotTable, HLOOKUP/VLOOKUP, Statistics)

Wet Lab Skills: Analytical Techniques (Gravimetry, Volumetry), Proximate Analysis, Separation & Extraction Techniques (Soxhlet, Gravity/Vacuum Filtration, Distillation), Instrument-assisted (Spectrophotometry, HPLC Chromatography), Safety & Compliance (GMP, GLP, BSL)

Dry Lab Skills: Statistical Analysis, Modeling & Simulation, Data Analysis, Data Visualization, Growth Modelling, Life Cycle Analysis (OpenLCA), Molecular Docking Simulation (Autodock Vina & Autodock Tools)

Microsoft Office & Google Workspace (Ms. Word, Ms. PowerPoint, G. Sheets, G. Docs, G. Slides, Ms. Teams)

Languages: Indonesian, English
